

Towards 2025 New Focus

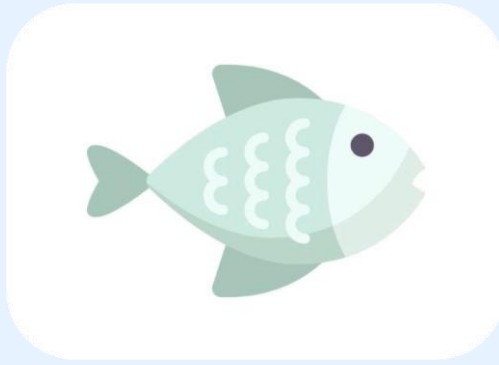

GMP-grade recombinant protein

GMP-grade recombinant proteins are vital for cell therapy. We offer high-quality, animal-free products for cell culture, ensuring safety and purity for cell therapies.

mRNA Raw Materials

mRNA raw materials are the foundational components for developing nucleic acid drugs and gene therapy products. These materials are precisely designed and synthesized for applications in transfection monitoring, expression analysis, and scientific research. They also offer customization and modification options to reduce immune responses, meeting the demands of advanced research.

Allergen Materials

Croyez provides recombinant antigens and chimeric IgE antibodies for food, environmental, and animal allergens. These products support diagnostics, research, and the development of therapies.
